Mobile Telephone **MM35D**
USER MANUAL

Reading the User Manual prior to using the phone
is highly recommended.

If any device malfunction is detected, please contact the Maxcom technical support, or file a complaint at the point of sale.
Direct phone number:
+ 48 32 325 07 00

Note: The phone works in the GSM 900/1800 MHz. At least one SIM Card must be correctly inserted prior to switching on the phone

1 INTRODUCTION

Thank you for purchasing the Maxcom telephone. Our telephones are designed for the GSM network, and meet all European standards. The phone might be used in various networks, depending on roaming settings provided by your service provider. In order to be able to use the phone, the User must select GSM service provided by a service provider. The phone has a lot of great features; how well it works, however, depends on service available in the GSM network of your choice.

To learn more, contact your service provider.

This User Manual has been published by the Manufacturer. Corrections and modifications arising from errors, and inaccuracies in current information and advancing the phone or software might be made at any time without prior notice; such updates, however, will be reflected in future versions of the User Manual. For more information or any assistance go to our website at www.maxcom.pl.

The Manufacturer reserves their rights to any content of this Manual.

2 TECHNICAL SPECS:

- Big font, easy Menu
- Big backlit keys
- Phone book -500 entries
- SMS Memory – 500 entries
- Micro SD Card Service up to 16 GB
- Speakerphone
- Radio FM
- Alarm Clock
- Audio File Player
- Battery: 1000mAh
- Desktop Charger
- Idle time: up to 300 hrs*
- Conversation time: up to 10 hrs.*
- Dimensions: 145 X 52 X 14mm
- Weigth: 86g

*depending on the GSM network conditions and signal

3 THE SET INCLUDES

GSM Telephone
Charger
Desktop Charger
Battery
User Manual
Warranty Card

Note: Keeping the original package is recommended as it might be used for transport.
Keep the receipt as it is necessary for warranty.

4 ACCESSORIES

Use only batteries, chargers, and accessories as recommended by the Manufacturer of this phone. Check with your seller what accessories are available in your area.

5 IMPORTANT SAFETY PRECAUTIONS

Reading the guidelines below will minimize the risk of misusing the phone.

- USING – The telephone emits electromagnetic field that might negatively interfere with other electronic devices including medical equipment.
- Never use your phone in any area where the use of mobile phones is prohibited such as hospitals, airplanes, refueling points or at proximity to flammable materials. Using mobile phones in such places might expose others to danger.
- Never use the phone without suitable accessories while driving.
- A device and its accessories might contain small parts. Keep your phone and all parts out of reach of children.
- SERVICE - Never repair nor modify your phone by your own; any repairs should be made by authorized service only.
- CLEANING – Never clean the phone with any chemicals or corrosives.

- HEARING AID – If a user has a hearing aid, carefully adjust phone volume and properly set the hearing aid sensitivity.
- ELECTRONIC MEDICAL EQUIPMENT – The telephone is a radio transmitter that might interfere with medical equipment and implants such as hearing aids, heart pacemakers, and insulin pumps, etc. The minimum distance of 15 cm between the phone and the implant is recommended. For more information, contact your doctor or a medical equipment manufacturer.
- ELECTRONIC EQUIPMENT - To avoid a risk of degaussing, keep the phone away from electronic devices.
- WATERPROOF – The telephone is not waterproof. Keep it dry at all times.
- DUSTPROOF – The telephone is not dustproof, it should not be used in places with a higher concentration of dust. Protect the phone against metal chips that might make the phone malfunction.
- DISPLAY SCREEN – never press hard the screen and never use sharp tools as doing so might damage the display screen.
- Never press battery contact pins with metal tools as it might cause an explosion.
- Never expose the phone to either low or high temperature, direct sunlight, or high humidity. Do not place your phone next to heating devices such as radiators, heaters, ovens, furnaces, camp fires, barbeque, etc.
- Protect your hearing!

Prolonged exposure to loud sounds might damage your hearing. Listen to music at a moderate level, and do not keep your phone too close to an ear, while using a speakerphone.

6 GETTING STARTED

Prior to using the phone, a SIM Card must be installed. Be careful not to damage the card while inserting it.
Keep SIM Cards away from children.

6.1 SIM CARD AND BATTERY INSTALLATION

Prior to inserting the SIM Card, make sure the phone is switched off, and the battery is removed. The charger must be disconnected. To insert the SIM Card, first remove the battery as shown in drawings below and follow the instructions:

- When the phone is switched off, slide the battery cover downwards, and remove it.
- Remove the battery lifting it up with your fingernail from the topside of the phone
- Insert the SIM Card into the slot, with metal contact pins facing downwards. Make sure the card notch goes downwards.
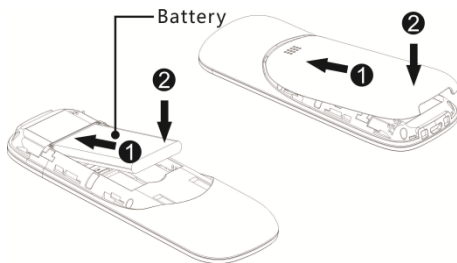

- There is a spot for the MicroSD memory car under the SIM Card slot. Insert the card into the slot. You can install a memory card up to 16GB on the phone.
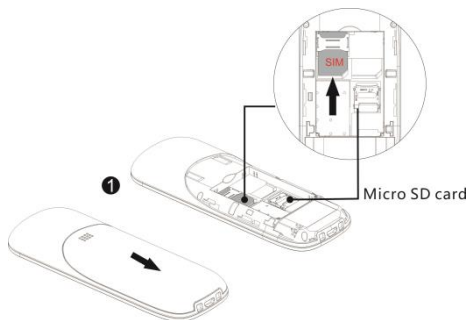

Be careful while using a memory card especially while inserting and uninstalling it. Some memory cards require formatting on the computer prior to the first use.
Regularly, make copies of data stored on cards used in other devices, if you use SD cards! Misuse or other factors might damage the card or cause data to be lost.

Battery installation:
- Insert the battery so that contact pins +/- will face downwards.
- After inserting the battery, put the battery cover back and slide it upwards.

Charging the battery:
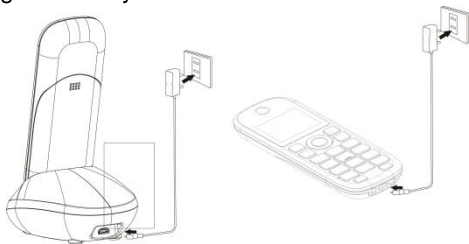

Important! You should use the charger included in the set. Using other chargers might damage the phone and will void the warranty.

Never connect the charger if the back cover is removed.

To charge the phone:
1. Plug the charger into a power outlet.
2. Plug the charger into the jack located at the bottom of the phone. A message about charging will appear on the display, and the bars in the battery icon will keep blinking as long the battery charging is in process.
3. As soon as the battery is fully charged, unplug the charger from the power outlet, and then cable from the phone.

If the process of charging is complete, there will be a message on the display "Battery fully charged", and the battery icon will stop blinking.

6.1.1 DESKTOP CHARGER

In case of using a desktop charger, first you need to connect the charger with a desktop charger, and then plug it into a power outlet. To charge the battery, all you need to do is to place the phone on the desktop charger with contact pins downwards.

Important:
- o Prior to charging make sure the battery is installed correctly
- o Never remove the battery while charging – you might damage the phone
- o If the voltage is too low for the phone to work properly, a warning message will appear on the display that the phone will be automatically switched off, and the phone will be switched off.
- o If the battery is deeply discharged, it might take up to several minutes for the message to appear after the charger is plugged in.
- o If the phone was not used for a long time, the battery might be so called "deeply discharged"; to recover a deeply charged battery you should leave the battery connected although there is no message on the display. It might take up to an hour for the message to appear.

7 LOW BATTERY ALERT

The phone will beep (if warning alerts are enabled in profile) and a message "Battery discharged" will appear on the

display, if the battery level is too low. The icon ▭ will appear on the screen. If you see such a message, charge the battery.

It allows you to change the Menu language. If you set a foreign language by mistake, to change it back to the language you want, in Idle mode press:
- 1x OK
- 2x UP
- 1x OK

- 2x DOWN
- 1x OK

select the language you want and press OK.

17.4 DISPLAY SCREEN

17.4.1 WALLPAPER

Select a wallpaper for the phone (it will work as a background for your screen in Idle mode).

17.4.2 AUTOMATIC KEYPAD LOCK

This feature allows to set time for the keypad to be automatically locked.

17.4.3 BACKLIGHT

Display screen backlight: allows to set time of backlighting the display screen.

17.4.4 BRIGHTNESS

This function allows to set brightness of the display screen. Use the key LEFT/RiGHT to adjust brightness.

17.5 SECURITY SETTINGS

17.5.1 PIN CODE

If this function is enabled, the phone will ask you to enter the PIN Code every time the phone is switched on, and you can change the PIN Code.

17.5.2 **PHONE SECURITIES**

You can enable locking the phone. Every time you switch on the phone, entering lock code will be required. Default code is 1122.

17.6 **CALL SETTINGS**

17.6.1 **NUMBER WITHHOLD**

It is a network service. If your provider offers such a service, a configuration will be required. This feature allows you not to display your own number while calling.
Select „Gets Network", „Withhold number" or „Send number" and press „Ok".

17.6.2 **CALL WAITING**

It is a network service. If your provider offers such a service, a configuration will be required.
After entering MENU and entering option: Settings->Call Settings->Call Waiting you can check availability and decide if you want to enable such a feature.
If Call Waiting is enabled, and the User is talking on the phone, he/she will be notified about any other incoming phone call by a special alert of a second call. You can answer the second incoming phone call and suspend the first one.

17.6.3 **CALL FORWARDING**

It is a network service. If your provider offers such a service, a configuration will be required. The User might direct incoming phone calls to be forwarded directly to voicemail or to any other number.

1. To select Call Forwarding, in MENU go to Settings->Call Settings->Call Forwarding
2. Then select when you want to forward phone calls from the available list:**1 All phone calls** (forwards any incoming phone calls received by your number) **2 When unavailable** (forwards phone calls if your phone is switched off or out of reach) **3 When I don't answer** (forwards incoming phone calls if you don't answer them) **4 When busy** (Forwards incoming phone calls if you are currently talking on the phone) **5 Forward any data connections 6 Abort any forwards.**
3. Press **Enable** and enter the number you wish to forward incoming phone calls to, to enable such a service, or **Disable** not to use it.
   To see what is the current status of this feature, go to **Check Status**

17.6.4 CALL BARRING

It is a network service. If your provider offers such a service, a configuration will be required. This feature allows you to restrict certain types of phone calls.

1. Go in MENU to:
Settings->Call Settings->Call Barrings
2. Select type of phone calls you wish to restrict from the list. You can restrict any outgoing phone calls, outgoing international, international (except to home), any incoming phone calls and incoming roaming phone calls. You can also update your lock password.

17.6.5 BLACK LIST

You can add a number to a black list. If such a function to block incoming calls and text messages is enabled, (selected option Reject) any incoming phone call and a

message from the blacklisted number will be automatically rejected.

17.6.6 CALL DURATION REMINDER

You can select phone call duration feature. You will hear a beep every time you have selected (31-60sec) or after certain time has passed (2-3000sec) to notify you about phone call duration.

17.6.7 AUTO REDIAL

If this feature is enabled, when you fail to make a phone call, the phone will automatically redial the number.

17.6.8 ANSWERED PHONE ALERT

If this feature is enabled, after the call has been successfully made, you will hear a notification alert.

17.6.9 ANSWERING CALLS

You can set any key to answer a phone call if pressed.

17.7 NETWORK SETTINGS

Network Setting: you might select a service provider manually or automatically.

17.8 FLIGHT MODE

You can enable a flight mode. If this mode is enabled, there is no connection with the GSM network, making phone calls and sending/receiving messages is not possible.

17.9 **RESTORE FACTORY SETTINGS**

Use this option to restore factory settings. Select in MENU: Settings->Restore Factory Settings, and then enter the security code. To finish, confirm by pressing the green receiver.

> **Warning:** Default security code is 1122

18 **COMPUTER CONNECTION**

You can connect the phone to a computer by a USB cable, and you can copy and transfer files between the phone and the computer.

To connect:

- Insert the USB cable to the telephone,

- insert the other end of the cable to a computer jack,

- You will see a message on the phone screen: „Mass Memory Device" and "Port COM. Select the Mass Memory Device.

19 **FAQ (TROUBLESHOOTING)**

Only qualified service workers are authorized to repair your phone. Unauthorized repairs and modifications will void the Manufacturer's warranty!

„Can't make a phone call"	Make sure the number you are dialing is correct. If you make an international phone call, dial a country code before the actual number (e.g. 0049 or +49 for Germany). If you have a prepaid card, make sure there are sufficient funds available on the card to place a phone call.

„No SIM Card, emergency calls only (112)"	Make sure the SIM Card is installed correctly
„The phone does not work, the phone does not charge when plugged in"	The phone might be switched off; switch on the phone by pressing and holding the Make Call key (green receiver) for about 3 seconds. If you have not used the phone for a long time, the battery might be "deeply-discharged". To recover a deeply-discharged battery leave your charger plugged in, although there might be no image on the display.
„Can I make a phone call while abroad"	If you are out of the country, the phone logs on automatically to the foreign network, if ROAMING is enabled. To learn more, contact your service provider
„Can I make an emergency call if there is no reception or if there are no funds on my account?"	If you are in the area with no reception of any network, no phone calls can be made. If you have no funds available on the account, emergency call to 112 can be made

„How to get most of my reception?"	If there is a message „Does not work" on the display, it means there is no signal or no funds available on your account. In such a case, only making emergency calls to 112 will be possible if the user is within the network of other providers. Places such as buildings reduce signal strength, therefore you should get closer to a window or relocate to an area not surrounded by many buildings.
„There is a message on the display „Press * to unlock", keys don't work"	Keypad lock is enabled. Unlock the keypad by pressing the Left Function Key, and then press * (star).
„What is a Text Message Center"	It is the service provider's center number storing all text messages. The number is stored on the SIM card, but you can change the number in the phone MENU and enter another number.
„When the fee for making a phone call is charged?"	A fee for making a phone call is charged as soon as a phone call is made. To learn more about charging details, contact your service provider.
„How to make sure a text message has been delivered to the recipient?"	Enable Delivery Report option. As soon as the text message is delivered, you will get a return message (network service).

20 WARRANTY TERMS

The phone is covered by warranty; to get warranty, a proof or purchase is required.
There is a charge for repairing phone defects arising from malfunction, electrostatic discharge, and lightning strikes.
Any attempts to repair or modify the phone on your own will void your warranty.

The above is presented for information only.

21 BATTERY INFORMATION

There is a battery on the phone that might be charged and recharged with the charger included in the set.
The phone lifetime depends on various working conditions. The distance from the transceiver station, number and length of phone conversations significantly reduce its lifespan. While moving, the phone switches between transceiver stations and it also reduces the lifespan of the battery.
After multiple charges and discharges, it is natural for the battery to lose its qualities. If significant loss of efficiency is observed, you should get a new battery.
Use only chargers recommended by the Manufacturer.
Never leave the charger connected for longer than 2-3 days.
Never keep the phone in places with excessive temperature. It might negatively impact the battery and the phone.

Never use the phone if it is visible damaged. It might cause short circuit and might damage the phone. The battery should be inserted in accordance with polarization.

Leaving the phone in places with excessively high or low temperature will increase its lifetime. The battery should be stored in temperature 15°C - 25°C. If you insert a cold battery to the phone, the phone might not work properly and there is a risk of damage.

Old batteries pose environmental risks. They should be disposed of at a special place in a special container in compliance with current regulations. Never throw old batteries or chargers to municipal solid waste, they should be collected for disposal.

NEVER PUT BATTERIES NOR CHARGERS INTO FIRE!!!

22 SAR INFORMATION

This telephone meets all international standards pertaining to the impact of radio waves. The product both receives and emits radio waves. It is designed not to exceed any limits pertaining to impact of radio waves recommended by international guidelines. These guidelines were developed by the International Commission on Non-Ionizing Radiation Protection (ICNIRP), an independent scientific organization with a safety margin to protect all people regardless their age and health condition. Such guidelines use a unit of measurement called Specific Absorption Rate (SAR) – actual absorption.

As recommended by ICNIRP, the border value of SAR for portable equipment is 2,0 watts per kilogram (W/kg). SAR value is determined at the maximum transmit power; the actual SAR value while the product is working is usually lower than the indicated level. Such discrepancies result from automatic changes in device power necessary to

ensure that the device operates at a minimum power level required to be connected with network.

Although SAR values might vary for different models of phones or even for different positions of the same model, they are all compliant with regulations pertaining to safe level of radiation.

According to WHO current research, there is no need to apply any special restrictions in using portable devices. According to WHO, in order to reduce radiation, a length of conversation should be reduced, or headset or speakerphone should be used, or the phone should not be held in proximity to head or body.

The highest SAR value taken in tests	
SAR – device next to head	0.841 W/kg 10g (GSM900)
	0.176 W/kg 10g (GSM1800
SAR – device next to body	1.123 W/kg 10g (GSM900)
	0.544 W/kg 10g (GSM1800)

SAR values might also vary due to various reporting and testing requirements in different countries as well as to different frequencies in a certain network.

23 PROTECT YOUR ENVIRONMENT

Important: The phone follows the European Waste Electrical and Electronic Equipment Directive 2002/96/EC (WEEE) and the Polish Act on Waste Electrical and Electronic Equipment.

Such a logo tells us that the equipment, after use, must not be disposed of in the normal waste stream.

Important: Never throw your phone & accessories to municipal solid.

Proper handling of waste electrical and electronic equipment helps to avoid health and environment hazards arising from presence of hazardous components and from improper storage and use of such equipment.

EC Declaration of Conformity 04/2017/EC

Maxcom S.A., ul. Towarowa23a, 43-100 Tychy declares under our sole responsibility that:

Dual-band GSM cell phone for use in public 900/1800MHz networks

Maxcom MM35D

complies with the Directive of the European Parliament and the Council 2011/65/EU of 8 June 2011 on the restriction of use of certain hazardous substances in electrical and electronic equipment and meets all the essential requirements of Directive 1999/5/EC - R&TTE (Radio Equipment and Telecommunications Terminal Equipment).

This device is compliant to harmonized standards indicated below:.
Safety:
            EN 60950-1:2006+A11:2009+A1:2010+A12:2011 +A2:2013
Health (SAR):
            EN 50360:2001+A1:2012; EN 62209-1: 2006;
            EN 62209-2:2010; EN 50566:2013/AC:2014
EMC:
            EN 301 489-1 V1.9.2; EN 301 489-7 V1.3.1
Radio
            EN 301 511 V12.1.1
The conformity assessment procedure referred to in Article 10 and detailed in Annex [IV] of Directive 1999/5/EC has been carried out with involvement of the following institutions:

Phoenix Testlab: Notified body: 0700
Expertise No. 17-210439
